Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions.

 Its goals are to:

● Find the best tech solution to solve existing business problems.

● Describe the structure, characteristics, behaviour, and other aspects of the software to project stakeholders.

● Define features, development phases, and solution requirements

● Provide specifications according to which the solution is defined, managed, and delivered.

**Example - Solution Architecture Diagram:**
